

Go deeper than you could alone.

Empowering mental health practitioners.

Pre-revenue · 1 practice live

India first

2 founders · 10 hrs a month

Most counsellors work blind. On the money they're owed. And on the clients quietly getting worse.

deepen fixes both. Invoicing that runs itself, and a warning before a client slips away. Sold self-serve, grown by referral, run in ten founder-hours a month.

PAIN 1 · WHY THEY SIGN UP

"Month-end is spreadsheets, invoices made by hand, and awkward messages chasing payment. Some clients just disappear."

Your month closes in ten minutes.

Log sessions as you go. One click bills everyone. Rupee and dollar clients stay separate. Short sessions pro-rate themselves. Receipts, part-payments and credits are handled properly.

Admin is the loudest complaint in therapist burnout studies. It is not the deepest one.

PAIN 2 · WHY THEY STAY. NOBODY IN INDIA DOES THIS

"Some clients get worse. You don't see it until they stop replying, and then you guess for a very long time."

You'll know by session three.

A quick score each session, measured against where that client started. When someone slides, the note carries a flag and says why. It is information about the client, never a verdict on the counsellor.

Predicted progress: this client against similar starters

Private by design. No employer, no platform, no supervisor ever sees it.

The market

India has no register of counsellors, so the number had to be reconstructed from the graduate pipeline and benchmarked against countries that do count. Base case, 2026.

20,756

Solo counsellors in India we can actually reach. Out of roughly 54,000 practising, 24,400 in solo private practice, and this many digitally reachable.

Workforce model, Aug 2026

6,642

Of those, able to afford Pro today. About a third. The rest are priced out, not unpersuaded.

Workforce model, Aug 2026

₹24 cr

India at 100% penetration, today. Rising to ₹54 cr by 2036 on the base case. A ceiling, not a forecast.

Workforce model, Aug 2026

675k+

Therapists in the US and UK alone. Roughly 600,000 US, 75,000 UK. Why the ceiling is not in India.

AutoNotes/BLS 2026 · BACP

The affordability wall is the finding that matters. Most Indian therapists earn ₹3 lakh a year or less. Pro at ₹1,999 a month is ₹24,000 a year, which is 8% of their gross revenue. That is not a pricing objection to negotiate past. It is a structural ceiling that only moves when practitioner earnings move.

So India proves the product. It cannot make it big. Full penetration of India's payable solo market is ₹24 crore today and ₹54 crore by 2036. For scale, the combined FY24 revenue of India's ten best-known digital mental health platforms was about ₹103 crore. 100 paying users is 0.5% of the reachable base and entirely achievable. 10,000 would be a fifth of every solo counsellor in India we could reach, in 2036, on the base case. The path below is built on that.

Price a month	₹999–1,999	₹1,499	₹1,199+	₹0	₹2,100	₹4.3–8.7k	₹6k

The honest read. Indian tools sell admin. Their "analytics" count revenue and cancellations, not client progress. The global players do track scores, but none flags deterioration or predicts trajectory, and at ₹4,000 to ₹9,000 a month they have priced themselves out of India. **Two rows are ours alone. The price column is the moat at home.**

Pricing

No free tier. 14-day trial. Annual by default. The first 25 users keep their price for three years.

THE WEDGE

Practice

₹999 a month · ₹9,990 a year

Billing and clinical records, working in fifteen minutes. Wins on setup, not features.

THE BUSINESS

Pro

₹1,999 a month · ₹19,990 a year

Everything above, plus progress tracking, flags and predicted progress. Priced against supervision and training, which counsellors already pay for.

Today a counsellor buys measurement (₹2,100) and billing (₹1,499) separately. That is ₹3,600 a month, and still no prediction. **Pro does both for ₹1,999.**

Revenue and costs

Three cases, each ten times the last. India economics at ₹1,100 blended per user, which assumes a 60/40 Practice/Pro mix. Worth knowing: the workforce model puts only about a third of the reachable base above the Pro affordability line, so 40% is the optimistic end. Targets, not forecasts.

MONTHLY COSTS. THREE LINES, NO OFFICE.

Only the tech role steps up: part-time contract to 100 users, full-time at 1,000.

₹ A MONTH	10 USERS LAUNCH	100 MONTH 18	1,000 YEAR 2-3
Servers and tools Neon, Vercel, Resend	6,000	12,000	40,000
Tech person 20 hrs a week, then full-time	40,000	40,000	1,20,000
Digital marketing content, webinar, email	15,000	20,000	50,000
Total cost	61,000	72,000	2,10,000
Revenue	11,000	1,10,000	11,00,000
Net a month	-50,000	+38,000	+8,90,000
Net margin	n/a	35%	81%

Founders take nothing until past 100 users. Marketing is digital only. Content and tooling first, small paid experiments out of the same line.

REVENUE AGAINST OPERATING COST, ₹ A MONTH

Break-even at 59 users, around month 12. Getting there costs the founders ₹2.5 to 3 lakh. That is the price of finding out whether this works. After that, users grow ten times and costs grow three.

The path to 100,000 users

Four stages. The first two are India. The last two cannot be, and the workforce numbers are why. Grown through the founders' clinical network, a free monthly webinar, and content that compounds. No cold outreach, no demos, no selling to organisations.

INDIA · MONTHS 0-18 100 Prove the habit. 0.5% of the reachable base. Three-user beta, paid launch at month 4, break-even at 59. ₹1.1L a month. Still a side product.	INDIA · YEARS 2-3 1,000 Own the beachhead. About 5% of everyone in India we can reach and who can pay. Roughly ₹1.3Cr a year. This is close to India's practical ceiling, and it is the fork.	ENGLISH-SPEAKING · YEARS 3-5 10,000 Go abroad, because India realistically cannot supply this. Dollar pricing is already built, and the affordability wall does not exist in those markets. Needs HIPAA and GDPR, a team of five.	GLOBAL · YEARS 5-8 100,000 Own the category. The benchmark pool improves with every user and incumbents run fixed curves. About \$12M a year at a blended \$10.
---	--	--	--

The honest gate. Stages three and four abandon the side-product life, and they are not optional if the goal is size. India is where this gets proven and where the product earns its clinical credibility. It is not where the revenue is. That decision gets taken at the 1,000 mark with real numbers in hand, not before. North star throughout: **counsellors who have recorded scores four weeks running.**

Honesty line. No revenue today. One practice live, a co-founder's. Every projection is a target at a 60/40 Practice/Pro mix, not a forecast. Pricing stays unproven until the beta answers one question: what did you spend last year to become a better counsellor? Stages two to four depend on stage one working. Name decided: Deepen, domains registered. Trademark search pending.
